

# 2 of 5 (non-interleaved) version 5.0

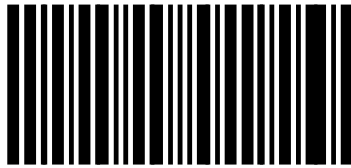

## Installing the font

Install the Two of Five (non-interleaved) font like any other TrueType or Type 1 font by using the Fonts Control Panel (Start/Settings/Control Panel/Fonts/File/Install New Font). Or use the Adobe Type Manger (ATM) Control Panel to install the Type 1 font.

Once properly installed, the Two of Five font will appear in the Type... menu of your Microsoft Windows applications.

## Creating 2 of 5 Symbols

Printing 2 of 5 bar code symbols is easy. Simply format the numeric string you want to encode in the Two of Five font using the “<” as the start bar and “>” as the stop bar. To encode “98104”, format “<98104>” in the Two of Five font.

The Two of Five character set includes only the numbers 0-9.

Like all outline fonts, the Two of Five font can be scaled to a wide variety of point sizes. The point size you use determines the bar height. For example, if you format a string at 36 points, the bars will be 1/2" tall.

Please contact us if you would like to redistribute our font bundled with your applications. This requires a separate redistribution agreement.
