

Flexera Software App Portal makes the enterprise app store a reality. End Users serve themselves, while IT maintains governance and full control of software approval and licensing. The end-to-end fulfilment process runs automatically, gathering approvals where necessary, enforcing proper licensing, verifying successful installation, maintaining a detailed audit trail and keeping the requestor informed of the status.

**BENEFITS TO
YOUR ORGANISATION:**

- **Empowers** business users with a single place to access and download on-premise, cloud-based or mobile applications at anytime from anywhere.
- **Increases** IT responsiveness by automating software delivery across complex enterprise environments and aligning service levels with metrics relevant to the user experience.
- **Reduces** support costs through decreased administration expenses and service desk call volumes to improve user satisfaction on both sides of the IT Service Desk.
- **Increases** governance over application usage with a central repository of well vetted applications and services that are delivered via role-based application distribution.
- **Enhances** overall software asset management by eliminating shelfware and compliance issues with visibility into software licenses deployed, combined with the ability to automatically reclaim and recycle software licenses.

Flexera Software App Portal presents users with a familiar browser interface that lets them order and receive applications in minutes.

Employees browse the applications available to them, and request applications by simply adding them to the shopping cart. The app store includes attributes such as cost, delivery time and if approvals are required. Applications can be requested by business users for their own use, by managers to request applications for their staff members and by help desk technicians for staff.

With support for Apple iOS and Android public store and internal apps, in addition to desktop applications, a single checkout process integrates deployment to VMware AirWatch Mobile Device Management, Microsoft SCCM and Symantec Client Management Suite, leveraging software deployment capabilities to deliver each application quickly, reliably and in the most appropriate way.

Flexera Software App portal automates license checking and approved to deliver applications to end users faster.

10 Ways App Portal will help you manage software deployment and compliance

Universal App Store for Desktop and Mobile Apps

Ensure control and efficient self-service delivery of approved applications by enabling employees to request desktop and mobile application from a single enterprise store.

Automates Software Approvals and Governance

Automated approvals are flexible and can use the turnkey App Portal approval process or be delegated to utilise established approval workflows in an existing ITSM implementation.

Reclaims Unused Software Licenses

Eliminate software waste by recycling unused licenses and returning them to the available license pool.

Keeps Employees Informed of Costs & Usage

Provide employee's one place to view license cost & usage information for apps installed on their devices.

Involves Employees in Software License Optimisation

The Software Policy Score informs employees how well the apps installed on their device comply with your corporate policies.

Automatically Checks for License Availability

Effectively maintains continual software license compliance each time an employee requests an application.

Enables Self-service OS Deployment and Migrations

Employees can initiate Self-Service OS and application migrations when the time is right for them.

Works Seamlessly with Deployment Systems

Present a single App store even when multiple software deployment systems are managing devices across the enterprise. App Portal supports Microsoft SCCM, Symantec Altiris Client Management Suite, and AirWatch by VMware Enterprise Mobility Management.

Enhances Software Asset Management

App Portal integrates with *FlexNet Manager Platform* (a separately licensed system which is the foundation of *FlexNet Manager Suite for Enterprises*) to obtain asset data from FlexNet Manager Platform, to check for license availability and reservation and to reclaim unused software.

Works with Leading IT Service Management Systems

App Portal integrates with BMC Remedy ITSM, ServiceNow, Microsoft Service Manager, and other popular ITSM tools to improve IT service quality, application delivery, and end user satisfaction with IT.

Migrating to Windows 8/10 or Server 2012?

With App Portal you can also deliver role-based, bare-metal builds, re-imaging and replacement of computers through your enterprise app store by leveraging core OS Deployment (OSD) functionality in Microsoft SCCM.

App Portal will make your OS migration / new SOE deployment easier and simplify ongoing desktop and mobile application management.

AdminStudio Inventory and Rationalisation

Application rationalisation consolidates the application portfolio and improves agility of day-to-day application service delivery

Continuous Application Rationalisation

Some enterprises rationalised their application portfolio for a big project, such as the Windows 10 migration, or a Virtual Desktop Infrastructure (VDI) rollout, while others wish they had. Waiting until a point in time, can make rationalisation a complicated and painful process. Proactive and agile organisations take the continual approach. Rather than rationalising applications annually or just prior to a desktop transformation project, the organisation rationalises applications on a continual basis. As part of the Application Readiness process, the rationalisation step is performed every time a new application is requested. For instance, the organisation can determine whether the application is the latest version, has already been packaged for deployment, or could replace an existing version already in production.

Eliminating Application Sprawl

Today's client computing environments are continuously changing, and the modern enterprise has accumulated more applications than the business needs, applications that must be actively maintained and supported every day. The size of the typical application portfolio has increased steadily due to mergers, acquisitions, and organic growth and includes a wide range of desktop applications, editions, and versions. The resulting application sprawl increases operational, infrastructure, and support costs.

Transform Windows Desktop Inventory into Actionable Information

- Continuously collects raw inventory data from Microsoft System Center Configuration Manager
- Collects site information from Active Directory
- Standardises the naming of over 150,000 applications from over 16,000 software vendors

Make Informed Application Rationalisation Decisions

- Sort and filter normalised inventory by vendor, application, category or classification
- Review summarised usage by user or machine and drill into compatibility details
- Track application owners and comments

Automatically Execute Workflows for Packaging and Deployment

- Informs you of newer versions of an application not yet deployed in your current environment
- Workflows ensure rationalised applications are packaged and ready for deployment
- Dashboards display workflows completed for each rationalisation project

Simplify Application Inventory

Continuously collects application inventory from Microsoft System Center Configuration Manager and conveys it to the Application Recognition Service, which scrubs the raw inventory to provide a normalised list of installed software per desktop.

Make Informed Decisions

Make the right rationalisation decisions by reviewing application packaging, application virtualisation, and application compatibility information from the AdminStudio Suite as part of the rationalisation process. Organise applications, sort and filter by vendor, application, category or classification and document owners and custom notes that help with research and decisions.

Align with Business Objectives

To ensure applications have clear next steps towards meeting rationalisation goals, automatic workflows assign tasks to each IT group involved in getting the application prepared, tested, and deployed successfully into the environment.

Maintain an Agile Portfolio

Keeps your desktop application portfolio under control and your organisation agile. React quickly to new efforts and rationalise day-to-day requests as part of the Application Readiness process.

Benefits to Your Organisation:

Focus Time and Effort on the applications that matter most.

React quickly to new efforts, rationalise day-to-day requests as part of the Application Readiness process

Reduce Support Costs and Security Risks by keeping applications current.

Ensure Applications Are Ready for Deployment and track Application Readiness progress.

Make Informed Decisions, know which applications are already packaged and compatible with target environments.

Align with Business Objectives Create rationalisation projects that align with desktop transformation plans by only looking at the users, devices or apps targeted for that effort.

Realise Business Value of a rationalisation effort, take action to ensure proper activities are completed.

Migrating to Win 8/10?

Now is the time to rationalise your applications!

FLEXERA SOFTWARE®

AdminStudio®

MUST HAVE Tools for application repackaging and migration to new Operating Systems

AdminStudio provides the most advanced **application packaging tools** to efficiently prepare reliable application packages for software deployment with a complete set of automated **MSI packaging**, customisation, testing and reporting capabilities.

Proven in benchmark tests to **decrease application preparation time by up to 70%**, AdminStudio streamlines the Application Readiness process and seamlessly hands off packages to leading software deployment tools.

- Cut MSI packaging time by up to 70%
- Increase stability & reliability of applications & platforms
- Integrates with Microsoft SCCM for direct import/exporting of packages — leverages your current investment and reduces manual effort.
- Application centric management physical, virtual, and mobile applications

FLEXERA SOFTWARE®

AdminStudio®

Application Compatibility Pack

AdminStudio Application Compatibility Pack

Significantly reduces the time and effort involved in ongoing Windows, Internet Explorer and Windows Server migrations by automatically assessing and fixing **application compatibility** issues.

With over 10,000 automated checks for Windows 7 compatibility and auto-resolution of 95% of installation-related issues, Application Compatibility Pack simplifies scoping and delivery of day-to-day applications requests, ongoing Windows migrations and desktop transformation projects.

FLEXERA SOFTWARE®

AdminStudio®

Mobile Pack

AdminStudio Mobile Pack

Enables centralised management of mobile apps with the same tools and processes used for physical and virtual applications.

Test mobile apps for device and OS compatibility and report on the behaviour, configuration and property settings of mobile applications to identify which apps require additional security assessment to safely and effectively meet user demands for access to business apps from mobile devices such as smartphones and tablets.

FLEXERA SOFTWARE®

AdminStudio®

Virtualisation Pack

AdminStudio Virtualisation Pack

Prepares software for reliable application Virtualisation deployment with a complete set of Virtualisation compatibility testing, automated conversion, validation, editing and management reporting capabilities.

With support for all leading virtual formats in a single tool, Virtualisation Pack fast tracks application Virtualisation and Virtual Desktop Infrastructure (VDI) projects.

All AdminStudio "Packs" are add-ons to the base AdminStudio product and not included by default.

System Admins & SOE Engineers

If you're working with any of these you'll love the AdminStudio suite of tools!
